

Integrator - A Suite of Integration Services for Oracle Cloud Applications

KEY BENEFITS

- Pre-Built Integration for Oracle Cloud Applications: Financials, Supply Chain, Procurement, Projects, and Sales
- No installation required
- Easy to extend additional integration logic using Oracle API's
- Significantly lowers the cost and the complexity of ERP implementation and ongoing integrations
- Supported by a Company with deep integration and Cloud ERP expertise
- Supports enterprise-strength with large transaction volume

KEY INTEGRATIONS

Master Data

- Customer
- Suppliers
- Banks
- Chart of Accounts
- ... and More

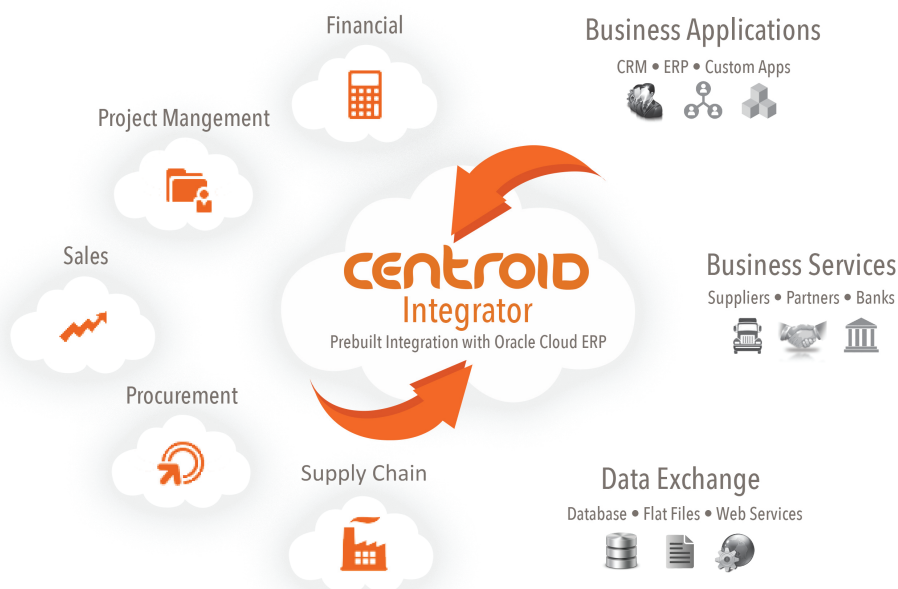

Transactional Data

- General Ledger Journal Entries
- Open Account Payable Invoices
- Open Account Receivables Invoices
- Open Purchase Orders
- Open Sales Orders
- Open Projects
- GL Daily Rates
- Fixed Assets
- ... and More

Pre-built Integration for Oracle Cloud Applications

The Centroid Integrator is a suite of integration services specifically designed for Oracle cloud applications. A powerful and broad cloud-based software as-a-service requiring no installation, feature rich data conversions and out of the box business event integration. Intuitive, easy to use, and powerful enabling users to easily maintain their Oracle cloud integrations directly in the cloud so they can innovate at a faster pace. When using the Centroid Integrator, your Oracle cloud deployments and integrations will be quicker, less complicated, less expensive, and the user experience will be seamless.

The Centroid Integrator is a proven tool for converting key pillar and historical data and integrating key transactional data with Oracle cloud applications like ERP, SCM, and CRM.

Faster time to market

The Centroid Integrator uniquely enables the user to build and maintain your integrations directly on our SaaS platform with easy to use workflows and UI. There are no third-party applications to manage. There are no third-party technologies to learn. There is no need to have a technical understanding of the Oracle API's. The Centroid Integrator diminishes errors in implementation and makes test cycles faster, thus reducing time-to-market for integrations of Oracle Cloud applications with other external systems across business processes.

Integrator - A Suite of Integration Services for Oracle Cloud Applications

KEY FEATURES

- Provides prebuilt adapters that can be utilized via database, file-based, and web services
- Monitor and manage your integrations
- Manage errors, Schedule and automate integrations
- Single Dashboard for monitoring
- Greatly reduces the complexity of ERP implementations and maintenance
- Aligned with Oracle Cloud upgrades every two quarters

PRICING

- Zero Cost during Centroid Professional Services deployments
- Annual Integration subscription from \$6,000
- One-time setup fees start at \$2,500

Key Features

The Centroid Integrator is purpose-built for Oracle cloud applications from the ground up. It extends the open API's to the maximum extent by having mapped and automated key processes. It is available immediately via monthly subscription and it is backed by Centroid, a Leader in Oracle cloud deployments and integrations.

Reduced Cost of Implementations and Integration

SaaS Application Integration is much more than making a web service call. By reducing the effort needed to build conversions programs and integration adapters, the Centroid Integrator significantly lowers the cost of building and maintaining the complex business logic through out-of-the box features that users can easily maintain.

Automated Migration

Predictable and efficient migration, the Centroid Integrator automates the mapping, loading, processing and even job scheduling of loading external data. Integration is seamless from migrating legacy data and integrating on-going financial data.

Supports both Inbound and Outbound

The Centroid Integrator supports both Inbound and Outbound data integration across Oracle cloud applications: Financials, Procurement, Projects, Sales, and Supply Chain. Inbound is supported for all FBDI and Web Services provided by Oracle through different mediums: SFTP, Email, Scheduling and Manual. Both the inbound/outbound data files utilize the formats that are supported by Oracle cloud applications.

Supports FBDI and Native public web services

Integrator uses out of the box FBDI and native public services to extend the integration data to and from Oracle cloud applications.

Configurable Notifications for integrations

The integrator can be configured to send notifications via Email for both success and exception outcomes for ongoing integrations.

Faster time to market

The Centroid Integrator uniquely enables the user to build and maintain your integrations directly on our SaaS platform with easy to use workflows and UI. There are no third-party applications to manage. There are no third-party technologies to learn. There is no need to have a technical understanding of the Oracle API's. The Centroid Integrator diminishes errors in implementation and makes test cycles faster, thus reducing time-to-market for integrations of Oracle Financial Cloud with other external systems across business processes.

Integration-as-a-Service

The Integrator is offered as a managed subscription that includes regular updates and support. All hosted services run on Oracle world-class infrastructure. All updates are rigorously tested and transparently released to your Oracle account.

Pre-built Extractors for Oracle EBS to Oracle Cloud

We have pre-built extraction logic available for Oracle EBS to Oracle Cloud Financials and Cloud Procurement module to reduce the timeframe for cloud implementation.
